LinkedIn — GitHub (122+ Repositories) — Portfolio

Professional Summary

Full-Stack & AI Software Engineer building production-grade frontend interfaces, scalable backend APIs, and autonomous AI agent workflows that solve real user problems end to end. Experienced across React.js, Next.js, TypeScript, Python (FastAPI, Django), and Node.js (NestJS, Express.js), with hands-on delivery of Retrieval-Augmented Generation (RAG) systems, Model Context Protocol (MCP) integrations, real-time analytics dashboards, and cross-platform mobile apps for paying freelance clients and open-source users.

Technical Skills

- **Languages:** TypeScript, JavaScript (ES6+), Python, Kotlin, SQL, HTML5, CSS3
- **Frontend Architecture:** React.js, Next.js (App Router, SSR), React Native (Expo), TanStack Query, Redux Toolkit, Tailwind CSS, Bootstrap, Three.js, GSAP, Jetpack Compose
- **Backend & APIs:** FastAPI, Django, Django REST Framework (DRF), Node.js, NestJS, Express.js, RESTful APIs, JWT & Clerk Auth
- **AI & Agentic Workflows:** OpenAI API, Claude API, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), Multi-Agent Orchestration, AI-Assisted Development (Claude Code, Cursor, Copilot), Prompt Engineering
- **Databases & Infrastructure:** PostgreSQL, MongoDB, Redis, SQLite, Sanity CMS, Room, Git, GitHub Actions, Linux, PostHog Analytics

Full-Stack & AI Engineering Projects

VerteX (AI-Powered Course Search & Learning Platform) — *Full-Stack AI Architecture*

Next.js (App Router), TypeScript, Sanity Context MCP, OpenAI API, Clerk Auth, PostHog

- Engineered an AI-driven learning platform enabling users to query course catalogs in natural language and jump directly to the exact video timestamp where a concept is explained.
- Built an intelligent backend integration pairing Sanity Context MCP with OpenAI to index and match chapter markers and transcript chunks for grounded, timestamp-accurate search results.
- Designed a split architecture separating the Next.js App Router client from Sanity Studio with Clerk route protection, and instrumented learner engagement and watch-depth funnels via PostHog.

CoolBraze-Ai (Multi-Agent Autonomous Customer Support System) — *Agentic AI & RAG System*

Python, Django, JavaScript, Claude API, Retrieval-Augmented Generation (RAG), Multi-Agent Workflows

- Built a complete AI-powered customer support platform using Django, Claude API, and Retrieval-Augmented Generation (RAG) to automate complex customer operations with grounded knowledge retrieval.
- Orchestrated three autonomous AI agents that collaborate to triage customer queries, validate policy constraints, and execute automated refund and resolution workflows.

AniTrack (Full-Stack Real-Time Media Tracker & Analytics Platform) — *Full-Stack Web Platform*

Python, TypeScript, FastAPI, Django, Redis, PostgreSQL, JWT, RESTful APIs

- Engineered a full-stack web platform end to end that centralizes scattered watchlists and real-time episode progress tracking across user sessions.
- Designed high-throughput RESTful APIs using FastAPI and Django backed by Redis caching and JWT authentication to eliminate state conflicts and power interactive visual analytics dashboards.

Raahi (Safety-Aware Navigation & Route Scoring System) — *Freelance Client Project*

React.js, TanStack, TomTom Routing API, MapTiler API, MVVM & Clean Architecture (Retrofit, OkHttp, Room, StateFlow)

- Built a safety-first route scoring prototype for a paying client that evaluates street lighting, crime tendency, community reports, and live incidents rather than optimizing for ETA alone.
- Architected the codebase with MVVM and Clean Architecture (Retrofit, OkHttp, Moshi, Room, Coroutines/StateFlow) and re-engineered the routing layer around TomTom and MapTiler APIs during a Google Maps outage to ship on schedule.

AirPods-Control (Open-Source Android BLE & Custom DSP Engine) — *Open-Source Systems App*

Kotlin, Jetpack Compose, Low-Level Android BLE APIs, Room Database, Custom 5-Band DSP Audio Engine

- Engineered a full-featured open-source Android app restoring native Apple AirPods controls on Android via Kotlin, Jetpack Compose, and Bluetooth Low Energy (BLE) APIs.
- Implemented real-time battery tracking, ANC/Transparency switching, optical in-ear detection, a persistent Foreground Service with Room logging, and a custom 5-band graphic equalizer with 3D spatial virtualization.

Education

Master's Degree in Islamic Studies — Currently Pursuing (Karachi, Pakistan) — Expected 2027
Bachelor's Degree in Islamic Studies — Graduated (Karachi, Pakistan) — Completed 2025
